Application Development

WORK EXPERIENCE

Front End Web Developer
REKA Studios

06/2020 - 06/2021   *Kuala Lumpur*

Tasks / Achievements

- Maintain, clean up and write documentation for existing codebase.
- Develop new features and fix bugs.
- Implementing web security.
- Exploring latest and stable web technologies to be used in projects.
- Developing some of major features in SERV. (Manual Input, Job Calendar, Microservices)
- Be a "small" dev lead for the SERV project. (Here I learn how to manage timeline for new features).

PERSONAL PROJECTS

POS The Restaurant
- This project is being build to display my current skills in front end web developer.
- This is a point on sale system allows the cashier or restaurant owner to key in what their customer buys and shows the total price and the balance need to be return.
- The project is built with ReactJS and Bootstrap and the data being stored in the browser localStorage since this is a front end project.
- The project can be accessed: dev.amirazmi.me/pos.

Healthcare App
- This application allows user to search and make appointment with the clinics and view more information about the clinics.
- The tech used for this project are ReactJS and Bootstrap for the front end and Django with Django REST Framework for the back end.
- The front end for the project can be accessed: dev.amirazmi.me/healthcare.
- The API for the project can be accessed: healthcare-on-demand.herokuapp.com/clinics.

Hairmess
- This application just shows the front end for an on demand barbershop application. This application will allows the user to make appointment with the barbershop.
- The tech used for this project are ReactJS and Bootstrap. There is no back end attached yet.
- The project can be accessed: dev.amirazmi.me/hairmess.
